

PRODUCT DESIGN CASE STUDY

Managing container rentals in one place

A digital workspace for a family-owned construction container rental business.

Agostina Boris
UX/UI Design

A family business, a shared daily workload

NINO rents construction waste containers. The office team coordinates deliveries and pickups with the drivers throughout the day.

Containers

HOW THE TEAM WORKS TODAY

Customer details in a spreadsheet. Daily jobs on paper, then in a planner. The office team sends each driver their route through WhatsApp.

The same information, recorded more than once

The office team carries each delivery and pickup request across several tools.

01

Paper notes

Secretaries write down the day's deliveries and pickups.

02

Daily planner

They copy those notes into the daily schedule.

03

WhatsApp

They send each driver their route by message.

THE COORDINATION RISK

The team relies on every update being written down and passed on.
A missed entry can leave colleagues without the information they need.

Less repeated work, a clearer daily schedule

A shared workspace for the two office administrators, designed around the tasks they already manage every day.

01

Record each job once

Use rental details to populate the delivery and pickup schedule, without copying them again.

02

Make pending work visible

Show missing assignments, upcoming pickups and payment balances in the relevant views.

03

Keep familiar routines

Use clear task labels and forms. Keep WhatsApp for driver routes, with summaries prepared in NINO.

WHAT NEEDS VALIDATION

Can both administrators manage a rental and its next steps without copying notes?

05. Information Architecture

The system structure follows the company’s real operational workflow.

Navigation follows the operational journey: **client** → **rental** → **logistics** → **payment**.

06. Creating a Rental

A guided flow centralizes client, container, dates and pricing in one place.

Create rental

Rental creation flow

INSIGHT

The flow **reduces duplicated entries** and makes each rental **easier to track** from day one.

07. Daily Logistics

A shared operational view helps the team coordinate deliveries, pickups and truck assignments in real time.

Logistics coordination flow

**01. Review schedule**
See today's deliveries and pickups

↓

**02. Assign truck**
Match each operation with the right vehicle

↓

**03. Monitor route**
Track the truck and its assigned stops

↓

**04. Update status**
Mark operations as scheduled, on route or completed

↓

**05. Handle changes**
Quickly adjust delays, reassignments or urgent requests

INSIGHT

The logistics view keeps **secretaries and drivers aligned**, making daily operations **easier to coordinate**.

BETTER COORDINATION. FEWER MISSED OPERATIONS.

08. Payments

A clear payment view helps the team register collections and differentiate pending from overdue balances.

Payment management flow

01. Review balances

Check pending and overdue accounts

02. Identify client

Open the client record and payment history

03. Register payment

Enter amount, method and payment date

04. Update status

Mark the balance as paid or partially paid

05. Follow up

Send reminders for unpaid or overdue accounts

INSIGHT

The payment view gives the team **better control over collections** and makes overdue balances **easier to detect**.

MORE VISIBILITY. FASTER COLLECTIONS.

09. Key Design Decisions

Simple, focused solutions for real operational needs.

Every decision was guided by one goal:
to make daily work easier for the secretaries,
drivers and the owner.

SIMPLIFY
ORGANIZE
SAVE TIME
KEEP IT REAL

1 Clear overview on the homepage

We designed a simple dashboard with the most important information at a glance: active rentals, containers, payments and today's operations.

2 Quick rental registration

We simplified the rental creation flow into a clear, step-by-step process to reduce errors and save time.

3 Visual logistics management

We created a daily operations view with a clear list and map, making it easier to assign drivers and track deliveries and pickups.

4 Payment tracking with clear status

We designed a simple table with visual status indicators to quickly identify paid, pending and overdue invoices.

Payments Filter				
Client	Due date	Amount	Status	Action
Obras del Centro	12/09/2026	\$180.000	Overdue	View
Maria López	20/09/2026	\$120.000	Pending	View
Estudio Sur	14/09/2026	\$150.000	Paid	View
Constructora Norte	28/09/2026	\$200.000	Pending	View

5 Centralized procedures

We grouped municipal permits and other documents in one place, with status and expiration dates, to avoid missed deadlines.

Procedures and permits + New				
Procedure	Entity	Expiration	Status	Action
Occupancy permit	Municipality	10/10/2026	Expiring	View
Container renewal	Municipality	15/12/2026	Valid	View
Transport permit	Environment	20/11/2026	Pending	View
Insurance	Provider	01/03/2027	Valid	View

6 A clean and consistent interface

We used a simple, modern design with clear navigation, icons and colors to make the system easy to use for everyone in the team.

10. Learnings & Next Steps

What I learned and how to move forward.

Key Learnings

- 1 **Keep it simple**
The team values speed and clarity over complex features. A clean, intuitive interface builds trust and adoption.
- 2 **Design for real people**
Secretaries and drivers have different needs and levels of tech experience. The system must be easy to use for everyone.
- 3 **Centralized information makes a difference**
Having clients, rentals, logistics, payments and permits in one place reduces errors and saves a lot of time.
- 4 **Visibility reduces stress**
Real-time status (e.g. delivery, pending payment, expiring permit) helps the team feel in control of daily operations.
- 5 **Small details matter**
Clear labels, status colors and quick actions make a big impact in day-to-day use.

Next Steps

- 1 **Validate with real users**
Test the prototype with the two secretaries and two drivers to gather feedback and refine the experience.
- 2 **Iterate and prioritize**
Adjust the design based on user feedback and focus on the most valuable features for the first release (MVP).
- 3 **Plan implementation**
Define technical requirements, data migration and a phased rollout.
- 4 **Explore future opportunities**
Add features like mobile access for drivers, automatic reminders and reports to support growth.

Long-term vision

Help NINO digitalize its operations, reduce manual work and support the company's growth, while keeping the human and familiar essence that makes it unique.

**Same team.
More possibilities.**

From paper and WhatsApp to a more organized and efficient way of working.

"This project showed me how a clear and simple digital tool can make a real difference in a traditional business — not by replacing people, but by giving them better tools to do what they already do, even better."

Agostina Boris
